

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (currently amended): A polymer compound having a polystyrene reduced number average-molecular weight of 10^3 - 10^8 , and comprising at least one repeating unit selected from the group of repeating units shown represented by formula (1) or formula (2),

wherein Ar₁, Ar₂, Ar₃ and Ar₄ each independently represent an arylene group or a divalent heterocyclic group; E₁, E₂, and E₃ each independently represent the below aryl group (A); a and b each independently represent 0 or 1, and a+b=1,

aryl group (A): an aryl group which has three or more substituents selected from an alkyl group, an alkoxy group, an alkylthio group, an aryl group, an aryloxy group, an arylthio group, a substituted amino group, a substituted silyl group, a substituted silyloxy group, or a monovalent heterocyclic group.

wherein the aryl group (A) has substituents on the carbon atoms selected by following (C),

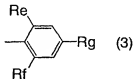

(C): An arylamine compound derived from aryl group (A) by replacing the free bond of aryl group (A) with amino group, and by replacing all the substituents of aryl group (A) with

$$\begin{array}{c}
 \text{---Ar}_5\text{---N}\left(\text{Ar}_6\text{---N}\right)_n\text{---Ar}_7\text{---} \\
 | \qquad \qquad \qquad | \qquad \qquad \qquad | \\
 \text{E}_4 \qquad \qquad \qquad \text{Ar}_8 \qquad \qquad \qquad \text{Ar}_9 \qquad \qquad \qquad \text{E}_6 \qquad (2) \\
 | \qquad \qquad \qquad | \qquad \qquad \qquad | \qquad \qquad \qquad | \\
 \text{E}_5\text{---}\left(\text{N---Ar}_{10}\right)_o\text{---N} \qquad \qquad \qquad \text{N} \qquad \qquad \qquad \text{N} \qquad \qquad \qquad \text{N---E}_7 \\
 | \qquad \qquad \qquad | \qquad \qquad \qquad | \qquad \qquad \qquad | \qquad \qquad \qquad | \\
 \text{E}_8 \qquad \qquad \qquad \text{E}_9 \qquad \qquad \qquad \text{E}_{10} \qquad \qquad \qquad \text{E}_{11} \qquad \qquad \qquad \text{E}_{12}
 \end{array}$$

2. (canceled).

3

4. (currently amended): The polymer compound according to claim 1, wherein the aryl group (A) is a group represented by the below formula (3),

wherein Re, Rf, and Rg each independently represent an alkyl group, an alkoxy group, an alkylthio group, an aryl group, an aryloxy group, an arylthio group, a substituted amino group, a substituted silyl group, a substituted silyloxy group, or a monovalent heterocyclic group.

5. - 9. (canceled).

10. (previously presented): The polymer compound according to claim 4, wherein Re and Rf each independently represent alkyl, alkoxy or alkylthio groups having three or less carbon atoms, and Rg represents alkyl, alkoxy or alkylthio groups having 3-20 carbon atoms.

11. (currently amended): The polymer compound according to claim 1, wherein said polymer compound further comprises a repeating unit represented by below formula (4), (5), (6), or (7),

(in the formula, Ar_{12} , Ar_{13} , and Ar_{14} each independently represent an arylene group, a divalent heterocyclic group, or a divalent group having a metal-complex structure; X_1 represents $-\text{CR}_2=\text{CR}_3-$, $-\text{C}\equiv\text{C}-$, or $-(\text{SiR}_5\text{R}_6)_d-$; X_2 represents $-\text{CR}_2=\text{CR}_3-$, $-\text{C}\equiv\text{C}-$, $-\text{N}(\text{R}_4)-$ or $-(\text{SiR}_5\text{R}_6)_d-$; R_2 and R_3 each independently represent a hydrogen atom, an alkyl group, an aryl group, a monovalent heterocyclic group, a carboxyl group, a substituted carboxyl group, or a cyano group; R_4 , R_5 and R_6 each independently represent a hydrogen atom, an alkyl group, an aryl group, a monovalent heterocyclic group, or an arylalkyl group; c represents an integer of 0 to 2; and d represents an integer of 1 to 12.

12. (previously presented): A composition comprising at least a material selected from a hole transporting material, an electron transporting material, and a light-emitting material, and at least the polymer compound according to claim 1.

13. (previously presented): An ink composition containing the polymer compound according to claim 1.

14. (original): The ink composition according to claim 13, wherein the viscosity is 1 to 20 mPa · s at 25°C.

15. (previously presented): A luminescent thin film containing the polymer compound according to claim 1.

16. (previously presented): A conductive thin film containing the polymer compound according to claim 1.

17. (previously presented): An organic-semiconductor thin film containing the polymer compound according to claim 1.

18. (previously presented): A polymer light-emitting device having a layer containing the polymer compound according to claim 1, between electrodes consisting of an anode and a cathode.

19. (original): The polymer light-emitting device according to claim 18, wherein the layer is a light emitting layer.

20. (original): The polymer light-emitting device according to claim 19, wherein the light emitting layer further contains a hole transporting material, an electron transporting material, or a light-emitting material.

21. (previously presented): A flat light source comprising the polymer light-emitting device according to claim 18.

22. (previously presented): A segment display apparatus comprising the polymer light-emitting device according to claim 18.

23. (previously presented): A dot-matrix display apparatus comprising the polymer light-emitting device according to claim 18.

24. (previously presented): A liquid crystal display comprising the polymer light-emitting device according to claim 18 as a back light.
